

SABERSCRIPT 1.0

- For JK2 & JKA -

Author: **SABER TOOTH / ACHILLES**

E-Mail: razoredge@charter.net

Website: www.EliteClan.com

Date: 3.4.05

Note: The Author is finished developing this script and no newer version will be released.

Changed Since the Beta Version:

1. Added a top notch recording script to record demos. Look under Settings\Recording Controls.
2. Changed, added, and optimized the smiley cycle under the "Favorites" menu.
3. Updated and dated the Elite Clan lineup under "Messages".
4. Changed and optimized the "Messages" menu items.
5. Added name -:(^*_^):- under "Other Original Names".
6. Couple random typos in the script, and certain defaults reworked.
7. Admin commands added.

Description

This script will contain all of your binds, messages, names, (etc...), on the keypad. It also features the ability to display the command you have selected before you execute it. Thus minimizing accidental execution error.

Features:

- Made to work best with the CJK-Mod and its exclusive features.
- Easily record demos with the built in demo script!
- Automatically optimizes connection settings for high speed internet.
- Do things with minimum keystrokes. (Submenu's as shallow as possible, everything very organized)
- Copy and past binds from uScript.cfg to SaberScript easily.
- Most Instagib servers were added in the Server Submenu for Jedi Outcast.
- By Default it will automatically configure textcolor to green, crosshair to "2", turns sky black, makes player "R2D2", and SEVERAL other settings upon being executed. All of course, all is for maximum performance. ;-)

- Any other configurations can be easily added such as: gameevents off and "whospec" upon being executed.
- This script can be installed right next to uScript! (So you can check it out before making the switch).
 \Exec uScript.cfg or exec \SaberScript.cfg to switch between them.
- Fixed and improved "Zoom" script: Pressing Z or X cycles through special Zooms.

Some files (names, clan names, etc.) you can replace with the equivalent from your uScript if you wish: Just make sure the name of the file is the same as the one you're replacing!

Credits

This script is based on TLA :: Law's "uScript 1.3".

This script incorporates Gohan's "Emotes" script.

The "Crosshairs.pk3" was taken from a website, "as is", with no readme or anything.

Installation & Configuration

Extract the "SaberScript.cfg" file, "Crosshairs.pk3" and the "SaberScript" folder INTACT into your "/Gamedata/base" folder.

Note: The following keys will be overwritten upon executing SaberScript and should be moved beforehand: Z, X, Page Down, and Number Pad.

When in JK2, type in console: \exec SaberScript.cfg

Use keys to navigate menus

Initialization Script: SaberScript/init/startup.cfg

The Initialization script is where most automatic settings are so if say, you don't like not seeing your gun, go there and change *cg_drawgun* value to 1.

The files are organized into 3 major divisions:

1. Easily configurable files are located right in the main *SaberScript* folder.
2. Less configurable files are located in the *data* folder.
3. Bits and pieces are located in the *SmallBits* folder.

You may freely modify the associated files to accommodate your needs.

(Quoting Law)

"I have noticed a slight problem running the script in Jedi Academy.

When you press KP "Numlock" for the names, the keypad numbers no longer respond.

You will have to press "Numlock" again to enable them."

If you find any/or know of any additional features that would enhance or better the script, please send an email to the author.

If you have any questions or comments about the script, please visit the website mentioned above or again, email the author.

If you use any of this script in one of your own, please give credit appropriately.
